

SIDDHARTH GAUTAM

Sonia Vihar, Delhi

☎ 9310208562 ✉ siddharthgautam573@gmail.com [LinkedIn](#)

EDUCATION

Netaji Subhas University of Technology, Delhi
B.Tech - Electronics and Communication Engineering

08 2023 - 08 2027
Delhi, India

COURSEWORK / SKILLS

- Data Structures
- OOPs
- Embedded Programming
- Web Development
- Linux & Windows
- HTML, CSS, JS, React
- C++

EXPERIENCE

NSIT, Delhi

May 2025 – Jul 2025

Research Intern

- Conducted research on CsBiI perovskite as a non-toxic alternative to lead-based solar cells.
- Used SCAPS-1D for simulation and optimization, and DFT for material property analysis.
- Used Origin software for data visualization and analysis.

PROJECTS

ChatGPT Clone

- I developed a fully functional ChatGPT clone leveraging ReactJS, HTML, CSS, and JavaScript, integrated with the OpenAI API. The application allows users to interact with an AI model in real time, simulating a conversational chatbot experience similar to ChatGPT. I implemented asynchronous API handling for smooth user interaction, a responsive and modern UI for accessibility across devices, and robust error handling for a seamless experience. The project showcases front-end design skills, API integration, and the ability to replicate intelligent systems using modern web technologies.

Dice Game

- I developed an interactive Dice Game using HTML, CSS, JavaScript, and ReactJS. In this game, users predict a dice value between 1 to 6. Once a prediction is made, the user rolls the dice. If the predicted number matches the rolled result, the player gains 2 points; otherwise, 2 points are deducted. The game includes score tracking, responsive design, and smooth animations, offering a fun and engaging user experience. It helped me understand user input handling, state management in React, and logic-building for interactive frontend applications.

Budget Making Application

- I developed a Budget Making Application using ReactJS, JavaScript, and Tailwind CSS to help users efficiently manage their daily expenses. The application allows users to register and log in, then add, edit, or delete their expense entries. Each entry includes item names, costs, and timestamps. Users can view their total spending and analyze patterns in their budgeting habits. The interface is clean, responsive, and user-friendly, making it accessible across devices. This project enhanced my frontend development skills and deepened my understanding of dynamic state management in React applications.

TECHNICAL SKILLS

Languages: HTML, CSS, JavaScript, ReactJS, C++, Python, Basic Django

Tools: VS Code, Postman, Git, GitHub

Frameworks: ReactJS, Django

OTHER PROJECTS

NSIT, Delhi

Jan 2024 - Apr 2025

Embedded Projects

- Autonomous Prosthetic Hand for disabled persons.
- Accident alert glasses embedded in helmet for elderly.
- Bluetooth-controlled autonomous RC Car.
